Art Unit: 1714

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1-14 are rejected under 35 U.S.C. 102(b) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over Berggren et al, US Patent No. 5,783,205.

Berggren et al discloses injectable bioerodible material comprising an oligomer or polymer of lactic or glycolic acid and a biocidal agent. Patentee indicates that the rate at which the biocidal agent or drug is released from the oligomeric or polymeric matrix, may be controlled by selecting appropriate molecular weights and degrees of crystallinity of the oligomeric or polymeric matrix. Patentee indicates that one of ordinary skill in the art would be able to determine by routine experimentation many suitable combinations of molecular weights, degrees of crystallinity, copolymers and mixtures of polymeric matrix materials by which to achieve the desired rate and duration of release. See col. 12, lines 7-46. It would have been obvious to one of ordinary skill in the art at the time of applicant's invention to employ a combination of low molecular weight (liquid) and high molecular weight (solid) oligomeric and polymeric substances to formulate an injectable biodegradable matrix in view of the teachings of Berggren
